

Bibliography of Map Projections

U. S. GEOLOGICAL SURVEY BULLETIN 1856

AVAILABILITY OF BOOKS AND MAPS OF THE U.S. GEOLOGICAL SURVEY

Instructions on ordering publications of the U.S. Geological Survey, along with prices of the last offerings, are given in the current-year issues of the monthly catalog "New Publications of the U.S. Geological Survey." Prices of available U.S. Geological Survey publications released prior to the current year are listed in the most recent annual "Price and Availability List." Publications that are listed in various U.S. Geological Survey catalogs (see back inside cover) but not listed in the most recent annual "Price and Availability List" are no longer available.

Prices of reports released to the open files are given in the listing "U.S. Geological Survey Open-File Reports," updated monthly, which is for sale in microfiche from the U.S. Geological Survey, Books and Open-File Reports Section, Federal Center, Box 25425, Denver, CO 80225. Reports released through the NTIS may be obtained by writing to the National Technical Information Service, U.S. Department of Commerce, Springfield, VA 22161; please include NTIS report number with inquiry.

Order U.S. Geological Survey publications by mail or over the counter from the offices given below.

BY MAIL

Books

Professional Papers, Bulletins, Water-Supply Papers, Techniques of Water-Resources Investigations, Circulars, publications of general interest (such as leaflets, pamphlets, booklets), single copies of Earthquakes & Volcanoes, Preliminary Determination of Epicenters, and some miscellaneous reports, including some of the foregoing series that have gone out of print at the Superintendent of Documents, are obtainable by mail from

U.S. Geological Survey, Books and Open-File Reports
Federal Center, Box 25425
Denver, CO 80225

Subscriptions to periodicals (Earthquakes & Volcanoes and Preliminary Determination of Epicenters) can be obtained ONLY from the

Superintendent of Documents
Government Printing Office
Washington, D.C. 20402

(Check or money order must be payable to Superintendent of Documents.)

Maps

For maps, address mail orders to

U.S. Geological Survey, Map Distribution
Federal Center, Box 25286
Denver, CO 80225

Residents of Alaska may order maps from

Alaska Distribution Section, U.S. Geological Survey,
New Federal Building - Box 12
101 Twelfth Ave., Fairbanks, AK 99701

OVER THE COUNTER

Books

Books of the U.S. Geological Survey are available over the counter at the following Geological Survey Public Inquiries Offices, all of which are authorized agents of the Superintendent of Documents:

- **WASHINGTON, D.C.**--Main Interior Bldg., 2600 corridor, 18th and C Sts., NW.
- **DENVER, Colorado**--Federal Bldg., Rm. 169, 1961 Stout St.
- **LOS ANGELES, California**--Federal Bldg., Rm. 7638, 300 N. Los Angeles St.
- **MENLO PARK, California**--Bldg. 3 (Stop 533), Rm. 3128, 345 Middlefield Rd.
- **RESTON, Virginia**--503 National Center, Rm. 1C402, 12201 Sunrise Valley Dr.
- **SALT LAKE CITY, Utah**--Federal Bldg., Rm. 8105, 125 South State St.
- **SAN FRANCISCO, California**--Customhouse, Rm. 504, 555 Battery St.
- **SPOKANE, Washington**--U.S. Courthouse, Rm. 678, West 920 Riverside Ave..
- **ANCHORAGE, Alaska**--Rm. 101, 4230 University Dr.
- **ANCHORAGE, Alaska**--Federal Bldg., Rm. E-146, 701 C St.

Maps

Maps may be purchased over the counter at the U.S. Geological Survey offices where books are sold (all addresses in above list) and at the following Geological Survey offices:

- **ROLLA, Missouri**--1400 Independence Rd.
- **DENVER, Colorado**--Map Distribution, Bldg. 810, Federal Center
- **FAIRBANKS, Alaska**--New Federal Bldg., 101 Twelfth Ave.

PREFACE

The discipline of cartography has a rich and complex history and a lengthy literature to accompany it. Cartographers have not only made maps; they have written about them in great detail. One of the foremost of these topics has been that of map projections.

The fascination, however, attendant upon the problems of getting "the round Earth on flat paper," to use a title by Chamberlin (1947), has captured the imagination of many others beyond the realm of practical mapmaking. The writings of cartographers, surveyors, and geodesists are thus accompanied not only by those of geographers, mathematicians, engineers, astronomers, and other physical scientists, but also by contributions from political scientists, artists, sociologists, school teachers, architects, and a host of others. Amateurs and professionals alike have been involved.

The result is a body of literature, covering theory and practice, description and criticism, commentary and advocacy, that can lay good claim to being the most extensively discussed subtopic within the confines of cartography. An accounting of the many articles written not only delineates the considerable extent of these outpourings but also indicates that there are many lines of research yet to be explored. It is to assist the pursuit of such research, rather than to compile a mere inventory, that this bibliography has been assembled.

The work itself has its origins in the earlier concerns of both editors, one having an accumulation of references deriving from a decade or more of active research in projection theory and practice, the other with involvement in a previous bibliographic project and many years of interest in the literature of cartography.

The present compilation is preceded by other bibliographies, but apart from the numerous

brief attachments to papers and books these have, for the most part, been sections of larger, more general, works. Chief among these has been the *Bibliography of Cartography* published by the Library of Congress in 1973 with a supplement in 1980 and an unpublished second supplement still in the process of assembly. Similar in significance are the near-annual listings of *Bibliotheca Cartographica* (1957-1972) and its successor, *Bibliographia Cartographica* (1974 to present), both published in Germany but compiled from international contributions.

Additional valuable material has been derived from the published bibliography of the American Geographical Society, the periodic compilations of *Geographisches Jahrbuch*, the card-index of the Royal Geographical Society in London, the annual listings of *Zeitschrift für Vermessungswesen*, the relevant sections of *Geographical Abstracts* and *Geo-Abstracts*, the French *Bibliographie Géographique Internationale*, the *International Catalogue of Scientific Literature*, and the Russian publication, *Referativnyy Zhurnal*. Also of assistance have been the current-literature sections of a number of journals such as *The American Cartographer*, *The Cartographic Journal*, *The Geographical Journal*, *Kartographische Nachrichten* and others, and dozens of minor sources which provided many contributions not captured by the major compilations.

The editors' intention has been to compile a bibliography that is the most comprehensive yet in its subject area. They are confident that with over 2,500 entries they have done so (some 900 entries through the second supplement of the *Bibliography of Cartography* comprise the most complete previous undertaking). Nevertheless, in the literal sense, they are well aware that this work is not complete. The nature of bibliographical work of such magnitude clearly prevents

such an ideal from being attained; to check all journals, all references, all libraries, all sources, and all languages in an exhaustive manner is impossible without the provision of unlimited resources and time.

The number of substantial references that have escaped, however, can be few. Others have been excluded deliberately on a basis of subjective evaluation, such as newspaper articles of insignificance, reviews unless deemed to add important information, many of the computer programs, and many minor and routine accounts in, for example, geography, navigation, or engineering texts. A few unpublished papers are included if they have been significantly referenced elsewhere. This bibliography still contains articles of lesser significance, but there is usually something special about them, or they bear the recommendation of other workers in this field.

Because of the interrelation of map projections with other disciplines, especially geography and mathematics, somewhat arbitrary lines of separation have been drawn by the editors. A prominent example is the field of conformal mapping, a branch of mathematics often used for the mapping of physical phenomena having nothing to do with the shape of the Earth or its graticule of meridians and parallels. Therefore, with a few exceptions, conformal mapping is included in this bibliography strictly in a geographical (or celestial) context.

A very quick appreciation of the growth and form of the literature may be obtained by a simple breakdown of the figures involved (see tables 1, 2, and 3). The 2,551 citations listed herein (treated for simplicity with equal weighting of the primary listing only) represent some 28 languages which can be conveniently arranged in 4 arbitrary groups. Of the total, 2,120 (some 83 percent) come from an initial group of 4: English, German, Russian, and French (table 1). Within these, English citations dominate, having over half the entries (1,094). German is a solid second with 591 (28 percent), while Russian and French follow, each with substantial totals, but having a combined figure less than that of German. The editors recognize that no matter how thoroughly these references have been sought without regard to geographical origin and date, there is a built-in bias tending

to favor modern Western publications. It is believed that the effect is minor, however, and does not alter the qualitative aspect of the conclusions reached.

The 431 remaining citations fall into some smaller groupings. Italian, Polish, Hungarian, and Spanish amount to 210 or some 8.2 percent of the overall total; a slightly smaller number, 184, results from a larger group of 9 languages, ranging from Chinese with 30 entries to Serbo-Croatian at 11. Lastly, there is a minor category of 11 languages totaling only 33 entries among them, while 4 bibliographies, not assigned to a particular language, complete the picture.

English, however, has been broken down a little further into 596 of United States origin, 309 emanating from Great Britain, and 189 from miscellaneous other sources. These figures are based mainly on the national origin of the sources, such as the journals, assisted by some judicious interpretation on the part of the editors. They are meant to be no more than a general guide; writers publish outside their own country, English is used commonly as an international medium, some changes in nationality have been noted, and there is the general difficulty of identifying the native home of every individual. They are useful, however, along with the other language totals in seeing how the subject of map projections has varied worldwide over time.

The chronology is summarized in tables 2 and 3 and needs only a few additional remarks. The earliest reference in the bibliography is to the classical work of Ptolemy, which is *circa* 150 A.D. and has been translated from the original Greek via Arabic and Latin to many modern European languages. There then occurs the familiar literature gap of the Dark Ages, marked only by the *ca.* 1265 work of Roger Bacon, before the scattered writings of the Renaissance period appear.

There are only 51 references, in 8 languages, before 1800, and it is somewhat of a surprise to find that only 19 are in Latin, the common language of classically based European scholarship. Similarly unexpected is the appearance of 3 citations in Swedish in the 1700's. English, German, and French lead the way with little difference among them in these early years, but it was German that pulled steadily ahead in the

first decade of the 19th century. It retained this dominance throughout the 1800's, providing 125 out of 292 recorded entries; French at 71 and English at 60 made up most of the rest.

French was steadily overtaken by English in the early 20th century, but it was German that continued to predominate until the cataclysm of the First World War. Germany recovered this leadership briefly during the 1930's, but from 1940 the majority position has been occupied by the United States with, from 1950, an increasing number of contributions from Russian sources. That the subject is healthy and thriving is indicated by the fact that over 1,000 of the entries in this bibliography have been published since 1960.

Thanks are due to a number of people. Ronald Grim, bibliographer in the Geography and Map Division, Library of Congress, kindly made available his card-files being prepared for the second supplement to the *Bibliography of Cartography*. John D. Hill, Arthur H. Robinson, and Waldo R. Tobler have taken time to study the manuscript, and we appreciate their suggested additions and corrections. The editors are grateful to reference librarians and facilities at the Library of Congress and at the libraries of the U.S. Geological Survey and of Clark University, and to Carlos B. Hagen. Additional translations have been provided by Karla Anderson, Andrew Grossz, Irena Kavalek, Ewa Katarzyna Raines, Nora Tamberg, and Paul

Teleki. The editors especially thank Ann Yaeger and also Cynthia L. Sabatino and Joyce E. Yordy for their very considerable typing and formatting.

Occasionally listings in the source bibliographies were found to have errors; in other cases, errors undoubtedly remain undetected. Similarly, the editorial process itself may have produced additional mistakes and omissions; the editors accept all responsibility for such and would be grateful to users for any corrections, suggested amendments, and general comments.

The standard U.S. Geological Survey format used will be self-evident. The treatment of language is English-oriented; the family name of an author is given first, followed by a comma, even if local convention is different. Russian, Bulgarian, and Greek are generally transliterated following American/British convention (especially that of the U.S. Board on Geographic Names). English equivalents of Chinese and Japanese are usually given instead of transliteration. The language of the paper is identified if it is either different from that of the title as shown in the citation, or if other than English, French, German, Italian, or Spanish. If the paper is in English, non-English abstracts are not listed. If the paper is not in English, but there is an English, French, German, and/or Russian abstract, the first available language of the four is listed.

SERIAL PUBLICATIONS AND ORGANIZATIONS SERVING AS MAJOR SOURCES OF PAPERS ON MAP PROJECTIONS

Over 400 periodicals are referenced in this bibliography. Relatively few journals have contained more than a half dozen papers each on the subject of map projections. This listing contains publications, agencies, and sponsors of conferences for which this bibliography contains 8 or more references of any type. In parentheses are the numbers of references, including the journal under its other names. In brackets are the current names of societies publishing the journal, if this is the case and the name is not included in the title. In some cases, a geographic journal contained papers on map projections only until a new cartographic journal began publication.

INDEX

BIBLIOGRAPHY OF MAP PROJECTIONS

(Note: This index is based, with a few exceptions, on words contained in or translated from the listings. Listings not indexed under a given topic may provide much more significant information.)

A

- Adams projections 19, 20, 22, 25, 27
Aeronautical charts 126, 329, 582, 722, 813, 1149, 1279, 1304, 1689, 1895, 2047, 2167, 2179, 2180
See also air-age maps; air routes, maps for
Africa, maps of 230, 427, 962, 1072, 1120, 1521, 1639, 1640, 2160
Agricultural maps 1310, 1819, 2146
Air-age maps 826, 993, 1001, 1066, 1499, 1722
Air routes, maps for 136, 137, 284, 286, 289, 328, 571, 649, 810, 811, 1220, 1553, 1842, 1894, 2218
See also aeronautical charts; air-age maps
Airy projection 38, 65, 509, 1095, 1162, 2277
Aitoff projection 39, 40, 67, 375, 961, 1431, 2377, 2421, 2485, 2486
Alabama, maps of 1754
Alaska, maps of 2129
Albers Equal-Area projection 21, 45, 265, 912, 1111, 1112, 1299, 1837, 2461
See also equal-area conic projections
Albiruni projections 698
Americas, maps of 41, 231, 252, 1119, 1637
Archaeology, maps for 631
Argentina, maps of 1999
Armadillo projection 1887
Asia, maps of 427
See also Eurasia, maps of
Astrolabes and projections 926
August Epicycloidal projection 105, 2018, 2153
Australasia, maps of 1640, 2160
Australia, maps of 231, 1383, 1696, 2057
Austria, maps of 148, 1300, 1437, 1445
Azimuthal Equal-Area projection 282, 1470, 1471, 2483
See also Lambert Azimuthal Equal-Area projection
Azimuthal Equidistant (Postel) projection 32, 39, 40, 60, 62, 303, 448, 514, 535, 537, 618, 782, 828, 942, 943, 1167, 1171, 1179, 1186, 1207, 1337, 1413, 1720, 1738, 1839, 1840, 1865, 1909, 1910, 1921, 2003, 2012, 2057, 2150, 2161, 2163, 2339, 2421, 2427, 2481
Azimuthal Logarithmic projection 944, 1968, 2101, 2102
Azimuthal (or zenithal) projections 59, 73, 74, 199, 391, 591, 794, 830, 837, 959, 1172, 1314, 1469, 1478, 1496, 1553, 1574, 1577, 1581, 1873, 1886, 1890, 1922, 2033, 2035, 2047, 2095, 2223, 2246, 2277, 2347, 2382
See also Airy, Azimuthal Equidistant, Azimuthal Logarithmic, Gnomonic, Lambert Azimuthal Equal-Area, "Magnifying-Glass"
Azimuthal, Orthographic, Perspective,

Pseudoazimuthal, Retroazimuthal, and Stereographic projections

B

- Babinet projection 109, 110, 193, 492, 1549
See also Mollweide projection
Bacon Globular projection 117
Baranyi projections 151, 156, 157, 158, 159
Behrmann projection 180, 1542
Belgian Congo, maps of 1750
Bibliography, extensive 207, 208, 805, 1333, 1456
Biology, maps for 2196
Bipolar Oblique Conic Conformal projection 1084, 1637
Boggs Eumorphic projection 243, 2196
Bonne projection 89, 121, 526, 557, 680, 756, 1512, 1655, 1658, 1704, 1898, 2069, 2376, 2471, 2495
Bousfield Modified Polyconic projection 948
Braun projections 309, 818
Breckman projection 311
Breusing projection 313
Briesemeister projection 314, 315, 316, 1636
British Empire, map of 1510
British Isles, maps of 887, 888, 889, 890, 984, 1898, 1899, 2483, 2496
Butterfly projection 327, 359, 360, 362, 363, 364, 365, 367, 370, 371, 452, 628, 808, 974, 1454, 2104

C

- Cabot projection 1913
Cadastral maps 184, 545, 546, 1259, 1529
See also topographic maps
Cahill projection
See Butterfly projection
Canada, maps of 713, 714, 737, 1989, 2063
Canary Islands, maps of 2151
Cartograms 82, 348, 901, 987, 1139, 1195, 1197, 1697, 1884, 1885, 1987, 2046, 2062, 2253, 2261, 2264, 2271, 2272
Cassini-Soldner (or Cassini or Soldner) projection 1, 464, 958, 1189, 1190, 1272, 1275, 1294, 1372, 1765, 1858, 1972, 2202, 2473
Celestial maps 547, 1068, 1217, 1523, 1633, 1634, 1678, 1915, 2006
Central projection
See Gnomonic projection
Chebyshev projections 397, 398, 645, 787, 1060, 1322, 1324, 1844, 1845, 1997, 2287, 2385, 2528
China, maps of 408, 669, 670
Cities, maps of 456, 1129, 1194
Classification of projections 238, 245, 372, 396, 403, 404, 874, 1061, 1062, 1327, 1407, 1465, 1585, 1612, 1623, 1762, 1778, 1782, 1934, 1993, 2158, 2168, 2252
See also nomenclature of projections
Coastal maps 2440
Colombia, maps of 1927

Complex algebra in conformal mapping 399, 1228, 1324, 1422, 1560, 1918, 1919, 1920, 2123, 2125
Computer-assisted map projection production 31, 61, 131, 183, 195, 196, 197, 246, 247, 248, 252, 261, 277, 279, 308, 339, 345, 391, 411, 455, 630, 642, 661, 705, 713, 714, 729, 730, 894, 1064, 1124, 1140, 1141, 1183, 1188, 1281, 1290, 1345, 1397, 1402, 1492, 1566, 1597, 1598, 1618, 1627, 1643, 1695, 1713, 1714, 1770, 1784, 1785, 1837, 1924, 2009, 2124, 2126, 2139, 2201, 2209, 2245, 2254, 2264, 2268, 2328, 2336, 2337, 2381, 2401, 2407, 2430, 2479, 2505, 2516, 2518, 2541
Conformal azimuthal projections 1469
 See also **Stereographic projection**
Conformal conic projections 34, 487, 509, 1230, 1233, 1284, 1279, 1305, 1311, 1377, 1469, 2373, 2399
 See also **Bipolar Oblique Conic Conformal, Lambert Conformal Conic, and oblique conformal conic projections**
Conformal cylindrical projections 1307, 1308, 1369, 1451
 See also **Mercator, Oblique Mercator, and Transverse Mercator projections**
Conformal (orthomorphic) projections 52, 90, 92, 112, 114, 175, 209, 240, 323, 339, 344, 379, 417, 451, 482, 566, 578, 615, 644, 673, 734, 736, 754, 755, 795, 868, 870, 871, 873, 911, 1016, 1017, 1038, 1041, 1105, 1174, 1191, 1220, 1221, 1224, 1231, 1253, 1254, 1258, 1321, 1340, 1341, 1355, 1356, 1395, 1421, 1423, 1424, 1448, 1452, 1466, 1467, 1468, 1472, 1477, 1515, 1516, 1573, 1580, 1586, 1587, 1609, 1611, 1617, 1663, 1664, 1699, 1718, 1786, 1958, 1961, 1962, 2038, 2044, 2049, 2050, 2051, 2052, 2067, 2222, 2224, 2226, 2240, 2286, 2299, 2356, 2357, 2358, 2359, 2360, 2375, 2442, 2443, 2446, 2495, 2498, 2522, 2535
 See also **Adams, August Epicycloidal, Chebyshev, conformal azimuthal, conformal conic, conformal cylindrical, Eisenlohr, Guyou, Lagrange, Littrow, Miller Oblated Stereographic, Modified Stereographic Conformal, Peirce, Space Oblique Mercator, and Triangle projections, complex algebra, and elliptic functions**
Conic conformal projections
 See **conformal conic projections**
Conic equal-area projections
 See **equal-area conic projections**
Conic equidistant projections
 See **equidistant conic projections**
Conic projections 12, 75, 161, 162, 510, 608, 662, 778, 893, 1241, 1246, 1314, 1478, 1496, 1755, 1855, 1875, 1886, 2173, 2278, 2520, 2524
 See also **conformal conic, equal-area conic, equidistant conic, perspective conic, Polyconic, and Satellite-Tracking projections**
Continents, maps of 1172, 1512, 1703
 See also **specific continent**
Convergence of meridians 1261, 1411
Cordiform maps 697, 1284, 1285
Craig Retroazimuthal projection 480, 481, 2037
Craster projection
 See **Parabolic projection**
Cyclic maps 1461
Cycloidal projection
 See **Jervis Cycloidal projection**

Cylindrical equal-area projections 147, 436, 439, 877, 1020,

1312, 1384, 1470, 1479, 1592, 1863, 2128, 2368
 See also **Behrmann, Gall, Oblique Cylindrical Equal-Area, Oblique-Gore, Peters, and Trystan Edwards projections**

Cylindrical equidistant projections

See **Cassini-Soldner and Equirectangular projections**
Cylindrical projections 12, 77, 309, 437, 486, 500, 789, 879, 971, 1020, 1248, 1314, 1478, 1496, 1517, 1638, 1680, 1723, 1768, 1872, 1874, 2002, 2068, 2247, 2347, 2484

See also **Cassini-Soldner, conformal cylindrical, cylindrical equal-area, Equirectangular, Gall, Miller Cylindrical, perspective cylindrical, polycylindrical, pseudocylindrical, and Satellite-Tracking projections**

Czechoslovakia, maps of 1318, 2186

D

de La Hire projection 539

De l'Isle projection 658

Denmark, maps of 337, 338

Dinomie projection 132

Disease, maps of 1171

Dissertation 170, 240, 340, 457, 677, 737, 1101, 1472, 1596, 1854, 2046, 2249, 2360

Distance-related maps 1810

See also **equidistant projections**

Distortion on maps 47, 255, 548, 731, 754, 758, 786, 789, 797, 824, 829, 836, 840, 1087, 1122, 1208, 1209, 1327, 1389, 1548, 1647, 1808, 1809, 1843, 1941, 2066, 2084, 2256, 2258, 2259, 2410, 2537

See also **Tissot indicatrices**

Donald Elliptical projection 574

Donnus projection 266

Double projection 74, 75, 77, 124, 256, 451, 949, 1047, 1184, 1191, 1356, 2038, 2039, 2144, 2228, 2373

Doubly Azimuthal projection

See **Two-Point Azimuthal projection**

Doubly Equidistant projection

See **Two-Point Equidistant projection**

Dürer, A., projections used by 567

Dymaxion map or Fuller projection 759, 761, 763, 764, 766, 1831, 1896

E

Eckert projections 68, 349, 402, 489, 617, 945, 2048, 2396

Eckert-Greifendorff projection 626

Economic maps 282, 505, 1299, 1826, 2361, 2380

Ecumenical projection 2461

Eisenlohr projection 639

Ellipsoid (spheroid), Earth as 60, 124, 135, 241, 256, 268, 341, 342, 405, 482, 566, 574, 615, 633, 634, 642, 745, 751, 753, 940, 949, 960, 968, 1003, 1004, 1012, 1024, 1127, 1191, 1213, 1254, 1255, 1271, 1273, 1276, 1277, 1321, 1338, 1339, 1355, 1356, 1408, 1415, 1417, 1418, 1439, 1440, 1441, 1442, 1444, 1468, 1527, 1661, 1664, 1681, 1736, 1756, 1758, 1760, 1828, 1966, 2045, 2075, 2113, 2128, 2223, 2255, 2299, 2338, 2375, 2391, 2412, 2512, 2523

- See also Gauss-Krüger, Universal Polar Stereographic, and Universal Transverse Mercator (UTM) projections, and triaxial ellipsoid
- Elliptic functions, conformal projections based on 20, 1419, 1425
- Elliptical projection
See Mollweide projection
- England, maps of
See British Isles, maps of
- Enlarged centers on projections

SELECTED SERIES OF U.S. GEOLOGICAL SURVEY PUBLICATIONS

Periodicals

Earthquakes & Volcanoes (issued bimonthly).

Preliminary Determination of Epicenters (issued monthly).

Technical Books and Reports

Professional Papers are mainly comprehensive scientific reports of wide and lasting interest and importance to professional scientists and engineers. Included are reports on the results of resource studies and of topographic, hydrologic, and geologic investigations. They also include collections of related papers addressing different aspects of a single scientific topic.

Bulletins contain significant data and interpretations that are of lasting scientific interest but are generally more limited in scope or geographic coverage than Professional Papers. They include the results of resource studies and of geologic and topographic investigations; as well as collections of short papers related to a specific topic.

Water-Supply Papers are comprehensive reports that present significant interpretive results of hydrologic investigations of wide interest to professional geologists, hydrologists, and engineers. The series covers investigations in all phases of hydrology, including hydrogeology, availability of water, quality of water, and use of water.

Circulars present administrative information or important scientific information of wide popular interest in a format designed for distribution at no cost to the public. Information is usually of short-term interest.

Water-Resources Investigations Reports are papers of an interpretive nature made available to the public outside the formal USGS publications series. Copies are reproduced on request unlike formal USGS publications, and they are also available for public inspection at depositories indicated in USGS catalogs.

Open-File Reports include unpublished manuscript reports, maps, and other material that are made available for public consultation at depositories. They are a nonpermanent form of publication that may be cited in other publications as sources of information.

Maps

Geologic Quadrangle Maps are multicolor geologic maps on topographic bases in 7 1/2- or 15-minute quadrangle formats (scales mainly 1:24,000 or 1:62,500) showing bedrock, surficial, or engineering geology. Maps generally include brief texts; some maps include structure and columnar sections only.

Geophysical Investigations Maps are on topographic or planimetric bases at various scales; they show results of surveys using geophysical techniques, such as gravity, magnetic, seismic, or radioactivity, which reflect subsurface structures that are of economic or geologic significance. Many maps include correlations with the geology.

Miscellaneous Investigations Series Maps are on planimetric or topographic bases of regular and irregular areas at various scales; they present a wide variety of format and subject matter. The series also includes 7 1/2-minute quadrangle photogeologic maps on planimetric bases which show geology as interpreted from aerial photographs. Series also includes maps of Mars and the Moon.

Coal Investigations Maps are geologic maps on topographic or planimetric bases at various scales showing bedrock or surficial geology, stratigraphy, and structural relations in certain coal-resource areas.

Oil and Gas Investigations Charts show stratigraphic information for certain oil and gas fields and other areas having petroleum potential.

Miscellaneous Field Studies Maps are multicolor or black-and-white maps on topographic or planimetric bases on quadrangle or irregular areas at various scales. Pre-1971 maps show bedrock geology in relation to specific mining or mineral-deposit problems; post-1971 maps are primarily black-and-white maps on various subjects such as environmental studies or wilderness mineral investigations.

Hydrologic Investigations Atlases are multicolored or black-and-white maps on topographic or planimetric bases presenting a wide range of geohydrologic data of both regular and irregular areas; principal scale is 1:24,000 and regional studies are at 1:250,000 scale or smaller.

Catalogs

Permanent catalogs, as well as some others, giving comprehensive listings of U.S. Geological Survey publications are available under the conditions indicated below from the U.S. Geological Survey, Books and Open-File Reports Section, Federal Center, Box 25425, Denver, CO 80225. (See latest Price and Availability List.)

"**Publications of the Geological Survey, 1879-1961**" may be purchased by mail and over the counter in paperback book form and as a set of microfiche.

"**Publications of the Geological Survey, 1962-1970**" may be purchased by mail and over the counter in paperback book form and as a set of microfiche.

"**Publications of the U.S. Geological Survey, 1971-1981**" may be purchased by mail and over the counter in paperback book form (two volumes, publications listing and index) and as a set of microfiche.

Supplements for 1982, 1983, 1984, 1985, 1986, and for subsequent years since the last permanent catalog may be purchased by mail and over the counter in paperback book form.

State catalogs, "**List of U.S. Geological Survey Geologic and Water-Supply Reports and Maps For (State)**," may be purchased by mail and over the counter in paperback booklet form only.

"**Price and Availability List of U.S. Geological Survey Publications**," issued annually, is available free of charge in paperback booklet form only.

Selected copies of a monthly catalog "**New Publications of the U.S. Geological Survey**" available free of charge by mail or may be obtained over the counter in paperback booklet form only. Those wishing a free subscription to the monthly catalog "**New Publications of the U.S. Geological Survey**" should write to the U.S. Geological Survey, 582 National Center, Reston, VA 22092.

Note.--Prices of Government publications listed in older catalogs, announcements, and publications may be incorrect. Therefore, the prices charged may differ from the prices in catalogs, announcements, and publications.
